

Secure Access DDoS Secure

Partner with Liquid Intelligent Technologies to protect your business from a DDoS cyber attack

Distributed Denial of Service (DDoS) attacks have been used on businesses of all sizes, resulting in massive damage to earnings and reputation. In the last year, cyber criminals launched over 9 million DDoS attacks, with around 4.4 million occurring in the second half of 2021. For the first time, Liquid is offering DDoS Secure a solution designed to safeguard the reputation and income of your business by protecting your networks and systems, while expanding the potential for growth and partnerships.

Get the best from Liquid

Liquid's DDoS Secure provides you and your business world-class protection against DDoS attacks from cyber criminals.

Avoid Assault On Your Network

Liquid Intelligent Technologies has the foresight, tools and expertise to protect your network or domain from attack by helping you avoid incoming threats. With Liquid you will have higher visibility of potential attacks, automatically mitigate threats and proactively secure your business. Protect your business, with us.

HOW DOES A DDoS ATTACK WORK?

NO PROTECTION

With no protection, the attack moves from source to servers and to the end user network flooding it with dirty traffic.

Resulting in service disruptions, server disruptions and unresponsive websites.

WITH PROTECTION

With protection, the attack moves from the source to a scrubbing centre.

The attack is mitigated through one of Liquid's four scrubbing centres.

Resulting in smooth uninterrupted service and optimal running websites.

Attacks originate from an outside source.

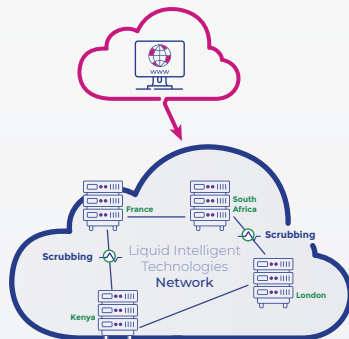

Secure Access DDoS Secure

Why use DDoS Secure?

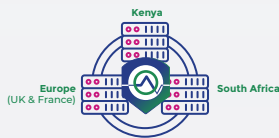

DDoS Secure can protect your business network when cyber criminals flood a target object with internet traffic to prevent users from accessing connected online services or sites. This specially designed protection service can proactively prevent attacks by scrubbing traffic and blocking known attackers or hostile traffic. With our DDoS Secure solution, we offer:

- Peace of mind for your business
 - Proactive protection for your network, domain and systems
 - Upstream protection, is the ideal place to protect your network
 - Receive reports on attacks
 - Easy and quick to deploy
 - To safeguard your company's reputation
 - Expand growth and partnership potential
- through the Liquid DDoS compliance
 - Liquid is a pan-African organisation with years of experience, and we bring this expertise to your doorstep
 - With Liquid as your cyber security partner, you can focus on your core business, and we take care of your network security
 - Localise the protection of your network
 - Clean your traffic

HOW SCRUBBING/MITIGATION PROCESS WORKS WITH DDoS Secure

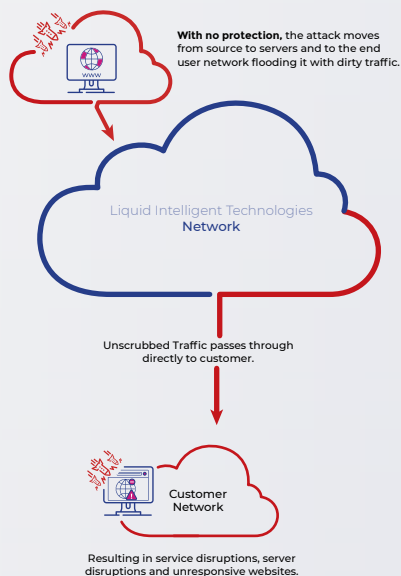

Mitigation Centres
Liquid solution has a distributed three scrubbing centres. Europe (UK & France), Kenya and South Africa

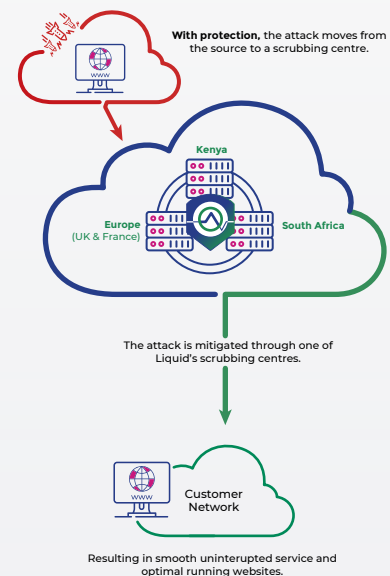

ATTACK SCENARIO 1: WITHOUT PROTECTION

With no protection, the attack information will propagate from the internet to the customer.

ATTACK SCENARIO 2: WITH PROTECTION

The scrubbing centre used can be anywhere on the Liquid network, as close as possible to the DDoS source.

Availability

Service is available to existing and potential customers in all regions where Liquid has operations.
